

Product disclosure regarding sustainability for the Discretionary Fund Management Mandate

Summary

The Discretionary Fund Management Mandate (hereinafter the “Mandate”) aims to direct investments in such a way as to limit the adverse impacts on the climate and environment, and encourage adherence to the principles of the UN Global Compact¹. By choosing this Mandate you are opting for a meaningful investment and investing your assets in a financial product that complies with environmental and social criteria.

The assets of the fund included in the Mandate² are carefully chosen by our BLI teams from our investment universe, which is made up of companies with transparent operations and clear business models.

We respect your decision to choose meaningful investments by establishing demanding criteria based on data provided by MSCI ESG Manager³:

1. we ensure that the data properly reflects the portfolio by requiring **coverage of Environmental, Social and Governance (ESG) data of the fund by MSCI ESG Manager**;
2. we guarantee the responsible nature of the portfolio by requiring **a rating for the fund of at least A**;
3. we limit the principal adverse impacts of the Mandate by aiming to align **at least 50%** of the investments with the objectives of Banque de Luxembourg (the “Bank”).⁴

The Mandate’s investment strategy of engagement is supported by the implementation of regular controls at the investment universe level. The fund held in the portfolio is subject to constant monitoring to identify noteworthy environmental and social events that could affect the business model and reputation of investment candidates, and any resulting deterioration in certain criteria that could lead us to exclude them from our investment universe. The implementation of sector policies and the analysis and monitoring of controversies allows us to ensure that the investments made correspond to certain prerequisites to respect the sustainability criteria defined by the Bank.

When you choose this Mandate, you choose to invest in a fund exposed to companies offering solutions to tomorrow’s challenges, and to combine performance with meaningful investment.

¹ The UN Global Compact is an initiative providing a universal and voluntary framework of commitments focused on ten principles relating to respect for human rights, international labour standards, the environment and anti-corruption measures.

² Banque de Luxembourg Investments

³ MSCI ESG Manager is a financial data provider selected by the Bank. ESG refers to Environmental, Social and Governance criteria.

⁴ In light of the proportion of sovereign bonds which are included in the defensive profiles of this Mandate and for which there is little coverage by MSCI ESG Manager regarding principal adverse impacts, this indicator represents a long-term objective rather than an undertaking by Bank.

No sustainable investment objective

This financial product promotes environmental or social characteristics, but does not have as its objective sustainable investment⁵.

Environmental or social characteristics of the financial product

The Mandate aims to direct investments in such a way as to limit adverse impacts on the climate and environment, and encourage adherence to the principles of the UN Global Compact. Furthermore, management of the Mandate is based on monitoring environmental and social controversies, respect for the UN Global Compact principles and the Bank’s sector exclusion policies. Lastly, this Mandate ensures that the companies in which investments are made by the fund held apply good governance practices.

The Mandate is therefore classified as an Article 8 product under Regulation (EU) 2019/2088 (the “SFDR”). A reference benchmark has not been designated for the attainment of this product’s environmental and social characteristics.

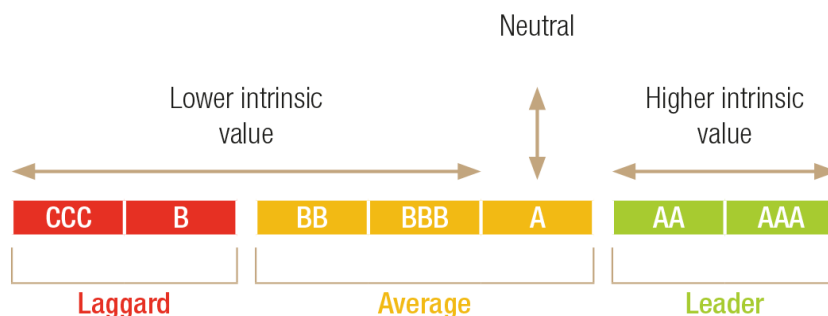

The Bank has selected a number of sustainability indicators to measure the limitation of adverse impacts on the climate and environment, and adherence to the UN Global Compact:

- Alignment with the UN SDGs;
- Limitation of the principal adverse impacts of investments made by the Mandate, with the aim of having at least 50% of the portfolio investments aligned with the limits set by the Bank;
- A quantitative approach based on ESG ratings established by our data provider MSCI ESG Manager.

MSCI ESG Manger’s ESG ratings are aimed at measuring a company’s management of financially relevant ESG risks and opportunities. This method is based on rules for identifying industry leaders and laggards according to their ESG risk exposure, and the way in which they manage these risks relative to their peers.

This approach uses the following additional indicators:

- Coverage of Environmental, Social and Governance (ESG) data of the fund by MSCI ESG Manager;
- A rating for the fund from MSCI ESG Manager of at least A.

Source: MSCI ESG Manager

⁵ The Mandate does not have as its objective sustainable investment, but does take issues related to sustainability into account as part of its investment selection process.

Investment strategy

The Mandate is unique in that all your assets are invested in a fund that complies with responsible investment principles and is managed by BLI. The range offers a diversified portfolio that matches your investor profile.

Various long-term growth themes addressing ESG issues may be included in the fund's equity component. The fixed income component of the fund may be fully invested in the bond market, and corporate bonds in particular. This component can also include different ESG themes, such as green bonds.

Assessment of investee companies' good governance practices involves:

- Monitoring and analysing controversies, especially social. The Bank has introduced a policy for excluding assets exposed to controversies that our data supplier classes as "very serious". This monitoring may be supplemented by the Bank's qualitative analysis;
- A quantitative approach based on the ESG ratings for companies provided by our data provider and the exclusion of companies with an MSCI ESG Manager rating of CCC. These ratings are designed to measure companies' ability to manage risks, and the ESG opportunities presented by their business and operations. They give an overview of companies' ability to manage resources, including human capital, sustainably, to guarantee operational integrity on the basis of sound management practices, and to comply with relevant standards including tax legislation. An MSCI ESG Manager rating of BB or higher illustrates a company's ability to manage its resources, mitigate principal risks, seize opportunities, and meet basic corporate governance expectations. The use of MSCI ESG Manager ratings as a basic measure of good governance encompasses four aspects of such practices.

Accordingly, this Mandate is classified as an Article 8 product under the SFDR, which means that it specifically promotes environmental or social characteristics, or a combination thereof, providing that the companies in which investments are made apply good governance practices.

Proportion of investments

The Mandate's objective is for the underlying fund of this product to be aligned with the environmental and social characteristics promoted (#1).

The Mandate's remaining assets (#2) include any cash and gold reserves, as well as investments made for diversification and/or hedging purposes, which may not be considered to promote environmental or social characteristics due to a lack of data from our data provider, but which – after qualitative analysis by the Bank – respect the restrictive characteristics and features specified for the Mandate.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

Monitoring of environmental or social characteristics

To supplement the ESG approach specific to each of the assets that make up the managed portfolio, the Bank also conducts quantitative analysis at portfolio level:

- Our aim is for the average rating of the portfolio to be A or higher.
- We target coverage of Environmental, Social and Governance (ESG) data of the fund by MSCI ESG Manager.

This approach is supplemented by:

- Consideration of the principal adverse impacts based on a definition of restrictive thresholds;
- Consideration of controversies (based on information provided by MSCI ESG Manager and exclusion of controversies deemed to be the most severe);
- The introduction of and compliance with sector policies (limiting or directly excluding the selection of products linked to certain industries such as coal).

Methodologies

In-depth qualitative analysis is carried out to assess the solidity of the management process, and the environmental, social and governance (ESG) approach of the assets in our universe in particular. To that end, various approaches may co-exist:

- **The best-in-class approach**, which seeks to select companies with the best environmental, social and governance practices in their sector or industry;
- **The ESG integration approach**, which places equal emphasis on financial and non-financial criteria;
- **The thematic approach**, which targets a specific area, such as the environment, water management or gender parity;
- **Impact investing**, which aims to generate a positive environmental or social impact. The key features of impact investing are its intentionality and the measurability of the impact.

In addition to **qualitative analysis** of asset management processes, our selection team ensures that the fund invests in companies following a well thought out sustainable approach. To that end, our analysts ensure that the fund has assessed the risks and opportunities related to sustainability issues and respects the Bank's ambitions on these matters.

Our system also includes a **quantitative element**, which means that it relies on external ratings of the fund's investments. To do so, we use MSCI ESG Manager scores, which rate the various assets according to ESG risk on a scale of 1 to 10.

Data sources and processing

The assets that make up our recommended investment universe are classified using a sustainability scale with a view to achieving complete coverage of our universe. For this, we rely on the analysis and on the data provided by the MSCI ESG Manager module.

MSCI ESG Manager carries out its analysis of assets based on data:

- published directly by companies (e.g. sustainability reports, annual reports, regulatory reports, websites, etc.); or
- published indirectly via governmental agencies, professional associations and financial data providers; or
- obtained by contacting the relevant companies directly.

In some instances, in order to compensate for missing data, MSCI ESG Manager may make estimates based on a proprietary methodology using various external data sources (from a variety of media, non-governmental associations and other market participants).

In order to guarantee the quality of the data used, we analyse the coverage of this data and define the minimum coverage thresholds required for the principal adverse impacts to be included in the Bank's investment decisions. In our view, an asset reporting indicators on a low proportion of its investments does not guarantee sufficient data quality to impact the investment decisions of the product.

In order to assess the ESG risks of a company, MSCI ESG Manager determines the main risks for the sector to which it belongs, then assesses its ability to manage the various ESG risks identified in comparison to its direct competitors. Companies which manage these risks best will be given a high score within their sector (best-in-class approach). This extra-financial approach compares companies within their individual business sector to determine those that are best positioned with regards to their understanding of the risks and opportunities related to sustainable development.

Furthermore, the implementation of sector policies and the analysis and monitoring of controversies allows us to ensure that the investments made comply with certain prerequisites that have been set to respond to the sustainability criteria defined by the Bank.

Limitations to methodologies and data

MSCI ESG Manager bases its research on data provided directly or indirectly by companies. The Bank is aware that this approach presents three primary limitations:

1. It is difficult to control the transparency, correctness and precision of the data provided directly by all companies covered by MSCI ESG Manager;
2. Analysis of data calculated on the basis of estimates may not be an adequate reflection of reality;
3. Furthermore, the standards and regulations relating to the disclosure of such data are not globally harmonised. This lack of harmonisation may result in regional disparities and, potentially, penalise some geographical regions with less strict standards than the European Union.

To minimise the impact of these limitations on assessing the environmental and social characteristics promoted by this Mandate, the Bank has established various filters:

- For the Mandate, if data is not reported by the company and cannot be estimated by MSCI ESG Manager, the Bank will not consider this asset as part of its sustainability analysis.
- The Bank ensures that the fund included in this Mandate has an ESG rating provided by MSCI ESG Manager.

Due diligence

In addition to the exclusion of assets for which ESG data is either not available or insufficiently meaningful, the Bank has established a system of controls to ensure the quality of data used as part of its sustainability integration.

The Bank uses a "best-in-class" approach based on a set of geographically grouped assets provided by MSCI ESG Manager. This approach enables the Bank to compare the data attributed to an asset with a cohort of comparable peers.

This approach enables us to identify any anomalies in the data provided by companies.

Engagement policies

We use a resolutely entrepreneurial approach to identify companies that will generate high levels of profitability for many years to come. This long-term perspective, where the aim is to understand the various aspects of a company before investing so as to measure all associated risks, aligns well with our ESG approach.

The investment universe is made up of companies with transparent operations and clear business models.

The ESG investment policy of the Bank and BLI for the discretionary Mandate is built on several separate yet interdependent pillars. In addition to sectoral policies and analysis of the investment universe detailed above, BLI has also established an active shareholder engagement policy.

As part of its ESG investment policy and voting policy, BLI subscribes to the Institutional Shareholder Services Inc. sustainable voting policy (ISS). This sustainability policy is designed to support shareholder resolutions based on standards that enhance long-term value for shareholders and stakeholders while also aligning the company's interests with those of the wider society.

BLI also actively endeavours to engage with companies in an effort to improve the transparency of their ESG-related information and adjust their behaviour so as to encourage them to make changes or bring their practices into line with recognised international standards.

Candidates for investment and companies held in the portfolio are subject to constant monitoring to identify noteworthy ESG events that could affect the company's business model, its reputation and potentially therefore the Bank's investment case. Our team thus receives daily alerts via the MSCI ESG Manager platform for all notable controversies to which portfolio companies are subject.

The filter is initially based on the classification of controversies allocated by MSCI ESG Manager based on the degree of severity (minor moderate, severe and very severe). We monitor controversies via the MSCI ESG Manager platform on a continuous basis, in order to restrict exposure to very severe controversies.

Designated reference benchmark

A reference benchmark has not been designated for the attainment of the environmental or social characteristics promoted by the financial product.
